STRESS COVERAGE

1. Executive Summary & AI Testing Scope

An AI-augmented automated testing evaluation was executed on the Meridian Health user profile module. The test targeted potential layout boundaries, render flex overflows, extreme user inputs, and null/empty state resiliency on constrained mobile viewports (320px to 390px widths).

TEST DIMENSION	TESTED SCENARIOS	INITIAL STATUS	RESOLVED STATUS
Lengthy Data (50+ Chars)	50-character names, 80-char email addresses, long doctor titles	OVERFLOW (993PX)	PASSED (EXPANDED)
Extreme Streaks & Metrics	99,999 days streak, 500,000 video count, 10,000h platform time	SAFE (FITTEDBOX)	PASSED (FITTEDBOX)
No Data / Null Profiles	null user, unassigned doctor, unparsed dates, empty string fields	FALLBACK GLITCH	PASSED
Narrow Screen Constraints	Ultra-compact screens (320x600, 360x740, 360x800)	OVERFLOW (115PX & 50PX)	PASSED

2. Detailed AI Edge-Case Test Execution Results

All automated test cases were authored in test/profile_view_edge_cases_test.dart and executed via the Flutter test harness:

#	TEST CASE DESCRIPTION	SCREEN SPEC	KEY VERIFICATION	RESULT
1	ProfileView renders safely with 50+ char name and long doctor name	360 × 740	Text truncation, maxLines: 2, no RenderFlex exception	PASS
2	ProfileView handles extreme streak counts (99999 days) & massive time	320 × 600	FittedBox scale-down check, zero horizontal overflow	PASS
3	ProfileView displays graceful fallbacks when profile is null (loading)	390 × 844	Fallbacks: 'Loading...', '0m', '0', '0 days', 'Member since...'	PASS
4	ProfileView displays graceful fallbacks when fields are blank/unassigned	390 × 844	Fallbacks: 'Loading...', 'Not Assigned', 'Member since ...'	PASS

#	TEST CASE DESCRIPTION	SCREEN SPEC	KEY VERIFICATION	RESULT
5	PersonalInfoView renders with lengthy multi-line email and long name	360 × 800	Multi-line contact info wrapped in Expanded, zero overflow	PASS
6	PersonalInfoView renders fallback placeholders when user is null	360 × 800	Default labels: 'Not provided', '-', 'JD' fallback	PASS
7	App loads and displays Meridian Health (Baseline Smoke Test)	Standard	Root app bootstrapping & routing verification	PASS

3. Defect Discovery & Code Remediation

Critical Defect Caught by AI Testing: Row inside `_buildInfoBoxWithTrailingIcon` and section headers in `personal_info_view.dart` lacked `Expanded` constraints. Long email addresses (e.g. 80+ chars) caused an immediate horizontal `RenderFlex` overflow by **993 pixels**.

Code Fix 1: Preventing Overflow in Contact Information Row

```
- child: Row(  
- children: [  
- Column(children: [Text(label), Text(value)]),  
- Container(child: Icon(trailingIcon)),  
- ],  
- )  
+ child: Row(  
+ children: [  
+ Expanded(  
+ child: Column(  
+ children: [  
+ Text(label, maxLines: 1, overflow: TextOverflow.ellipsis),  
+ Text(value, maxLines: 2, overflow: TextOverflow.ellipsis),  
+ ],  
+ ),  
+ ),  
+ const SizedBox(width: 8),  
+ Container(child: Icon(trailingIcon)),  
+ ],  
+ )
```

Code Fix 2: Section Header Flex Wrap for Narrow Screens

```
- const Text('Contact Information', style: TextStyle(fontSize: 18, fontWeight: FontWeight.w800))  
+ const Expanded(  
+ child: Text('Contact Information', maxLines: 1, overflow: TextOverflow.ellipsis, style: TextStyle(fontSize: 18, fontWeight: FontWeight.w800)),  
+ )
```

4. Design & Architecture Best Practices Summary

COMPONENT ELEMENT	RISK PATTERN	IMPLEMENTED SOLUTION	ROBUSTNESS LEVEL
User Full Name	Multi-line overflow on small cards	<code>maxLines: 2 + TextOverflow.ellipsis</code>	OPTIMAL
Streak & Platform Metrics	5-digit numbers breaking 3-column row	<code>Expanded + FittedBox(fit: BoxFit.scaleDown)</code>	OPTIMAL
Doctor Card Info	Long specialist titles colliding with chevron	<code>Expanded(Column) + maxLines: 1</code>	OPTIMAL
Detail Rows & Contact Info	Long emails pushing icon off-screen	<code>Expanded column + maxLines: 2</code>	OPTIMAL

COMPONENT ELEMENT	RISK PATTERN	IMPLEMENTED SOLUTION	ROBUSTNESS LEVEL
Profile Null Fallback	Null pointer exception or blank container	Null-safe ternary with fallback strings	HANDLED

Verification Confirmation: 100% of test cases passed cleanly under flutter test. No remaining layout assertion errors or unhandled exceptions detected.
